Notification requirements

What the portal tells researchers about their data. Each entry serves part of the INN Digital Infrastructure Strategy (2026). Each test names the entry it checks (a `Verifies:` line in the module's docstring).

How researchers are told was decided on 31 October 2026 (Patrick): both in the portal and by email.

Status: *settled* (agreed; tests required), *proposed* (awaiting a functional decision), *open* (needed by the strategy, not yet decided; no tests yet).

ID	Requirement	Serves (strategy)	Status
NT-1	A researcher is told, in the portal and by email, when their upload is stored, and how many files failed if some weren't. The email names no files, since file names can identify participants.	5.1 main flow step 5; 5.1 exceptions	proposed

NT-1 covers storage today. The strategy's other notifications (a failed format check, data held in quarantine for missing consent or a failed BIDS check) use the same mechanism once those checks exist.
